Pulpwood:
Celanese Mill Wood ... 86

PULP WOOD

IS A SLOW-GROWING CROP!

Even under the most favorable conditions of soil and climate it takes a tree about as long to grow to pulp wood size as it takes a child to grow to man size. New crops of trees must be set out by hand or grow from self-planted seeds as fast as old forests are cut over.

On the other hand, conversion of pulp into paper or board is a fast operation. Felts must remove water at terrific speed. And that, Mr. Superintendent, is precisely what Hamilton Felts do.

SHULER & BENNINGHOFEN
HAMILTON, OHIO
MIAMI WOOLEN MILLS *Established 1858*
